Reversible Ratchet Maintenance Kit Instructions

Use the TORX® key to remove the screws & disassemble the ratchet

Clean the inside of the ratchet once removed

To reassemble

- Insert direction switch into Ratchet Body
- Insert spring & ball into the ratchet body spring recess, Spring first
- Use flat blade screwdriver to carefully apply pressure to the ball & spring until the ball is pressed into the spring recess
- While holding the ball in position, install the pawl into the ratchet
- Remove the screwdriver, releasing the spring tension so the ball makes contact with the pawl.
- 6. Ensure the direction

- switch is seated into the pawl correctly, The pawl should move as the selector is moved
- Selection is moved.

 Lightly grease the ratchet gear assembly, Insert it into the ratchet body, ensuring the pawl stays in position & the quick release button is on the same side as the direction switch
- Fit retaining plate into the ratchet
- Fit the 2 TORX® screws & tighten
